

TBI AUDIO MONITORS THEATER APPLICATIONS

All TBI audio monitors are developed with one thing in mind - a solution to a sound problem whether it is entertainment or communication. Each monitor is technically competent for home theater applications with flexible uses. Our natural sound monitors benefit the home theater by elimination of the artificial sonic presentation typical of speakers. The myriad of resonances produced by the basic driver diaphragm creates minute distortions that color the sound and causes fatigue and stress especially at the levels typically used. How can a speaker be useful for natural sound reproduction as embedded in our movies if the sound reproduction is not natural and tires with time?

TBI MD-1 Natural Sound Monitors:

- Natural sound quality improves the perceived quality of the room
- Natural low frequency roll-off reduces stress and fatigue
- Excellent imaging from any listening position even while standing
- Close listening allows for greater flexibility in viewing positions
- Even sound distribution throughout the room – dialog is acute throughout
- Provides wide dynamic range (hear louder and softer sounds distinctly)
- Provides wide frequency range (broadband or voice applications)
- Allows for consistent theater sound quality with 2.0 through 5.1
- Reduces back EMF - improves amplifier performance - 8Ω load
- Excellent for Wi-Fi / Bluetooth distribution – small foot print big sound
- TBI Magellan subwoofer option provides deep natural bass extension
- Flush ceiling mount option for invisible theater applications
- Remarkable neutral center channel operation – adds natural sound
- Remarkable neutral rear channel operation – totally dispersed surround
- Low unit cost/performance ratio for inclusion in all areas
- Quality construction – reliable operation – gold plated 5-way posts
